St.Michael's recently celebrated British Science Week. I interviewed some children to find out what they thought about it.

What was your favourite part of Science Week?

Designing a creature that would survive on Mars - Logan.

When I looked at the x-rays of humans and animals - Sienna.

- -The penguin nest building Erin.
- -The experiment with the Scientist Christian.
- -The slime experiment! Benjamin.

Which experiment did you enjoy most and why?

- -When we made a parachute for an egg and dropped them, hoping they wouldn't crack! Toby.
- -The slime one because it was interesting to watch it expand Ethan.
- -Worm digging as we got to do a seagull dance to get the worms to the surface! Erin.

Tell me something new you learned about science?

- -The balloon-powered car experiment made me think about how to get the car to move. Through this concept I have easily learned the difference between potential and kinetic energy - Amanda.
- -That you need a balanced diet to aid brain growth Benjamin.

- -There are three different types of worms Frin
- -That Mars was full of life, but over time everything died Logan.
- -Science is not just one thing, it is many things Arthur.

Why is science important to you?

- -I find it fun and exciting Arthur.
- -Anything can start from science, just like how scientists invent things through discovery and research - Amanda.

Because I can teach my family about what I learn - Ethan.

- -Because I learn things I didn't know Logan.
- -It explains all aspects of the world and the universe around us Benjamin.
- -It is fun and we get to experiment and learn things about the animals Erin.
